Any and all antiquities or coins not sold before the closing date will be sent to the highest bidder on November 28, 1995.

If on the other hand, you bid \$75.00 on the same item and are still the high bidder at the end of the sale, the item will be mailed to you on the closing date, November 28, 1995.

If you are ever in the area, stop in to see us! Of course, it's best to call first. **Harlan J. Berk, Ltd. reserves the right to refuse any ridiculous bids.**

Rome, 293 AD, 5.37g; Pink p. 21 (citing 3 specimens), C-254 (300Fr), omitted from RIC-V/2. O: Bust r. wearing Lion Skin. R: HERCVLI DEBELLAT PROM Hercules standing l. attacking Hydra. As Diocletian took the name Jovius, the Jovian one, so he called his colleague Maximian Herculeus, the Herculean. This lot is the most spectacular embodiment of that title of Maximian. It depicts the emperor as Hercules wearing a lion skin, a godlike look on his face. The reverse depicts Hercules in the midst of a fierce battle with the Hydra which has wrapped itself around his leg. This type is so spectacular it is more like a medallion than a coin. Only three other specimens recorded. Mint State 35000

Nicomedia, c. 294 AD, 5.41g; Pink p. 44 (Lists 3 specimen), RIC-VI, 3 (R4: Reverse type mis-described), R: HERCVLI VICTORI SMN Hercules stdg. r., l. arm on hip and lion skin over l. shoulder. Portrait of the emperor struck in extremely high relief, but the spectacular side of this coin is the reverse. Extremely unusual and obviously realistic portrait of Constantius Chlorus which diverts from the party line of depicting all members of the Tetrarchy the same. The reverse shows Hercules capturing the Golden Hind but Hercules looks more youthful than normal and in the exergue is the real surprise and possibly the reason for its originality. This coin was minted at Trier in Germany and to this point only one other specimen has been recorded, in a Munzen und Medaillon sale from 1951. Mint State 21000

Bust I. holding spear in r. hand with aegis on l. shoulder/Zeus before elephant walking l. with victory upon its head. This coin is incredibly beautiful depicting a heroic bust of Antialcidas on the obverse with a reverse that is just as exciting showing Zeus walking with an elephant with trunk raised topped by a crowning victory. It is quite unusual to find a coin so exquisite in condition and design on both sides which is also a great rarity. It is likely that less than 10 of these coins exist in any condition. CARTHAGIAN "HORSE and PALM" BILLON COINS

The following selection of billon coins is from a North African hoard of about pieces, some of them are the finest examples in the hoard. Others just represent different types. This variety, with the reverse type of a horse superimposed palm tree, has not received the focused attention of numismatic scholars, examples have been published in collections, and representative specimens have been illustrated as appendages to various specialized studies. In some references the horse and palm tree billon is dated as early as the First Punic War (264-241 B.C.), or to the Libyan War (241-238 B.C.). However recent metallurgical analyses have shown that these horse and palm coins, with a silver content of only 10-15%, are more debased than the coinage of the Libyan War and therefore later (Cohen and La Niece, NC 1988, pp. 42, 46).

The hoard contents can be broadly classified into three groups. The first group is a large Tanit head on the obverse and often a pellet under the horse on the reverse (Lots 334-347). Similar pellets appear on the gold and electrum coinage of the Carthage mint. A second variety features a smaller Tanit head on a distinctively cast in a double-sided mold so that the edges are bevelled on both sides and the ridge. The principal special feature of this group is the sign of Tanit appears on both sides of a small number of specimens (Lot 354). A third variety features a variant obverse type in place of the traditional Tanit head - a woman of less "Punic" aspect, with straight hair loosely rolled on the back of the neck. The Tanit head, of course was based on Sicilian models but had evolved; the new type may reflect more recent Greek influences. *Jenkins, Essays Mildenberg*, pp. 134-135, has pointed out that the young head occurs on Carthaginian coins recovered from South Italian hoards and on

Italian coins struck for Hannibal which he associates with the last phase of the war in Italy when Hannibal was bottled up in Bruttium, 209-208 B.C. Carthage apparently placed this same head on very debased currency intended for domestic use, while simultaneously producing fine coinage for shipment to Hannibal in Italy.

We are currently studying this hoard in detail for purposes of publication. We have identified about a dozen different subvarieties. We hope that our study will establish the sequence of issue and perhaps enable us to propose more precise dates, as well as tracing the development of mint technique and perhaps clarifying the weight standard.

NOTE: The "WN" references below are "Working Numbers" for an article to be written about these pieces.

897. Roman King Midas, in white marble, with original red paint. 2nd-3rd century A.D. Midas, in Greek legend, king of Phrygia, son of Gordius. Because he befriended Silenus, Dionysus granted him the power of turning everything into gold by touch. Midas grew tired of his gift when even food became gold in his hand. Dionysus allowed him to wash away his power in the Pactolus river, which afterward had gold-bearing sands. It was also said that Midas was given asses ears by Apollo for preferring, in a contest, the music of Marsyas to the god's. Midas preserved his shame by wearing a Phrygian cap from all but his barber, who, wishing to tell it, whispered it into a hole in the ground. Reeds which grew out of that hole told the secret. There are traces of red paint remaining on his face and cloak. A truly beautiful example of the "Man whose touch turned things to gold"!
